

Lode Ergometry Manager - LEM 10

Versatile data and ergometer management

Highlights

Easy installation

- Simple step by step installer
- Automatic detection of exercise devices
- Easy setup of subjects

Multifunctional software for Lode ergometers

Software for all Lode ergometers, incl. options like BPM, HR, SpO2 etc. Worldwide commonly used bicycle and treadmill protocols are preprogrammed. Load, BPM and Borg notation triggers can be set remotely. Time trials can be implemented.

Complete Ergometry setting

The modular structure of the software combined with the accurate and reliable Lode ergometers offers a complete and modern ergometry setting.

Complete control

- Easy set up of Subject data with photo
- Create protocols quickly and efficiently
- Overview of progress during test
- Customized pdf reports

Additional functionality available in Modules

Functionality of the software can be enhanced using the modules, like Wingate sprint tests, Åstrand sub maximal tests and the possibility to program protocols with multiple decisions targets and formulas.

Lode Ergometry Manager - LEM 10

Versatile data and ergometer management

The Lode Ergometry Manager (LEM) is a software package used for controlling Lode ergometers and monitoring test subject ergometric parameters. The software enables the operator to program protocols, control ergometers, visualize, save and analyze ergometry data and print customized reports in PDF. Worldwide commonly used bicycle and treadmill protocols are standard preprogrammed. The program also provides a patient database and the possibility to connect to a SQL server or the Hospital Information System (HIS) with HL7. LEM 10 is also backwards compatible with previous versions, allowing you import and use your existing database easily. The software has been developed and tested according to the Lode principles of accuracy, durability and reliability. The Lode Ergometry Manager can be extended with various modules, each with its specific functions and visualizations. The Lode Ergometry Manager can be used for testing and training in several rehabilitation settings, sports medicine, physiotherapy and research environments.

For connection to our Lode ergometers, you will need to order a Network Connection Cable (#930930).

Before upgrading to LEM 10 also make sure that your ergometer has the latest firmware installed. Your distributor can assist you.

Features

Patient Database

An extensive patient database is available, which can work as a stand alone database or linked to a SQL server. HL7 connection to the Hospital Information System (HIS) is possible.

Isokinetic mode Excalibur and Brachumera

Isokinetic stages can be programmed for the Excalibur and Brachumera.

Visualisation of seating position Excalibur Sport

The seating position for the Excalibur Sport can be saved and compared with the actual or former positions

Sophisticated analysis menu

Possibility to zoom into the results and synchronize with other graphs. To have a better look with the use of the x/y coordinate functionality. Compare several test results from a Test subject in a clear overview, or compare different test subject performing the same exercise test. Define your own print report.

Customizable dashboard

The dashboard on the monitor can be customized and saved for several applications. Test views and Analysis can easily be adjusted, completed and saved.

User friendly protocol templates

Protocol templates for creating standard protocols for the bicycle and treadmill ergometers are available. An efficient manner to define the amount, duration and type of stages, in interval- step- or bodyweight controlled- protocols. Adjusting those protocols can be done at any time.

Advanced protocol editor

Exercise Protocols with target energy and target distance stages are created with the protocol editor. Special body weight depended stages, linear stages, ramping stages or Heart rate controlled protocols are easily programmed and customized. Default protocols are available.

Backwards compatible with previous LEM versions

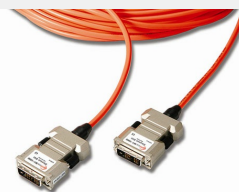

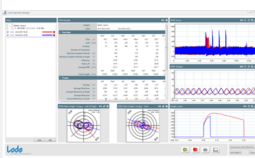

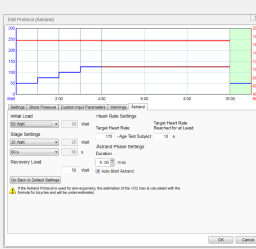

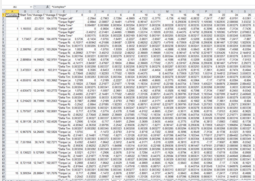

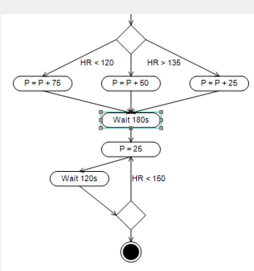

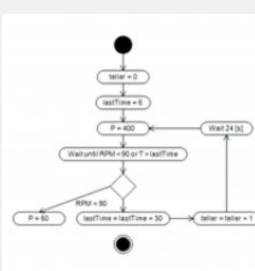

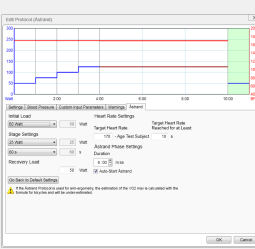

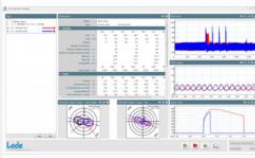

LEM 10 is compatible with LEM 6, 7, 8 and 9. This means that the database of these versions can be imported and used in LEM 10.

Lode Ergometry Manager - LEM 10

Versatile data and ergometer management

Lode Ergometry Manager - LEM 10 can also be extended with the following options:
